Programming Languages and Translators

Stephen A. Edwards

Columbia University

Spring 2016

Pieter Bruegel, *The Tower of Babel*, 1563

Facebook on 4115

Aho vs. Edwards for PLT?

Does anyone have strong opinions about either professor?

Thanks!

Like · Comment · Share

👍 11 people like this.

Stephen A. Edwards Definitely take it from Aho
November 17 at 1:54pm · Like · 👍 150

Sadly, Aho has retired.

Culpa on 4115

Edwards is the snarkiest, most sarcastic, immature professor you will meet in the CS department. He tells some really great nerdy jokes and his Facebook wall is hilarious since he belittles all his students publicly on it, but I don't recommend taking his class. Don't ever email him with an excuse or stupid question since he will publicly shame you (name removed though) on Facebook.

Objectives

Theory

- ▸ Principles of modern programming languages
- ▸ Fundamentals of compilers: parsing, type checking, code generation
- ▸ Models of computation

Practice: Semester-long Team Project

- ▸ Design and implement your own language and compiler
- ▸ Code it in the OCaml functional language
- ▸ Manage the project and your teammates; communicate
Quasi-required Text

Alfred V. Aho, Monica S. Lam, Ravi Sethi, and Jeffrey D. Ullman.

Compilers: Principles, Techniques, and Tools.

Addison-Wesley, 2006. Second Edition.

Bug Al about all bugs.

You can get away with the first edition.

Schedule

Lectures: Mondays and Wednesdays, 2:40 – 3:55 PM

January 20 – May 2

Midterm: Wednesday, March 9th

Final: Monday, May 2nd

Presentations: May 11th

Final project reports: May 11th

You can present before May 11th if you want to travel early.
All group members must present.

Assignments and Grading

40% Programming Project

20% Midterm

30% Final

10% Three individual homework assignments

Project is most important, but most students do well on it.
Grades for tests often vary more.

Prerequisites

COMS W3157 Advanced Programming

- ▸ How to work on a large software system in a team
- ▸ Makefiles, version control, test suites
- ▸ Testing will be as important as development

COMS W3261 Computer Science Theory

- ▸ Regular languages and expressions
- ▸ Context-free grammars
- ▸ Finite automata (NFAs and DFAs)

Collaboration

Collaborate with your team on the project.

Do your homework by yourself.

Tests: Will be closed book with a one-page "cheat sheet" of your own devising.

Don't be a cheater (e.g., copy from each other):
   If you're dumb enough to cheat,
      I'm smart enough to catch you.

Every term I've caught cheaters and sent them to the dean. Please try to break my streak.

The Project

The Project

Design and implement your own little language.

Six deliverables:

1. A proposal describing your language
2. A language reference manual defining it formally
3. An intermediate milestone: compiling "Hello World."
4. A compiler for it, running sample programs
5. A final project report
6. A final project presentation

Teams

Immediately start forming four-person teams

Each team will develop its own language

Assign each team member a specific role

Role	Responsibilities
Manager	Timely completion of deliverables
Language Guru	Language design
System Architect	Compiler architecture, development environment
Tester	Test plan, test suites

Culpa Suggestion

START EARLY, and really be selective in picking your team. A bad team will ruin the semester for you.

EVERY GROUP PROJECT

DOES 99% OF THE WORK

SAYS HE'S GOING TO HELP BUT HE'S NOT

HAS NO IDEA WHAT'S GOING ON THE WHOLE TIME

DISAPPEAR AT THE VERY BEGINNING AND DOESN'T SHOW UP AGAIN TIL THE VERY END

IN SCHOOL YOU HAVE EVER DONE

WeKnowMemes

When I die I want my group project members to lower me into my grave so they can let me down one last time.

First Three Tasks

1. Decide who you will work with
   You'll be stuck with them for the term; choose wisely.
2. Assign a role to each member
   Languages come out better from dictatorships, not democracies.
3. Select a weekly meeting time
   Harder than you might think.

Project Proposal

Describe the language that you plan to implement.

Explain what sorts of programs are meant to be written in your language

Explain the parts of your language and what they do

Include the source code for an interesting program in your language

2–4 pages

Language Reference Manual

A careful definition of the syntax and semantics of your language.

Follow the style of the C language reference manual (Appendix A of Kernighan and Ritchie, *The C Programming Langauge*; see the class website).

Final Report Sections

Section	Author
Introduction	Team
Tutorial	Team
Reference Manual	Team
Project Plan	Manager
Language Evolution	Language Guru
Translator Architecture	System Architect
Test plan and scripts	Tester
Conclusions	Team
Full Code Listing	Team

Project Due Dates

Proposal	February 10 soon
Language Reference Manual	March 7
Hello World Demo	April 6
Final Report	May 11

Design a language?

A domain-specific language: awk or PHP, not Java or C++.

Examples from earlier terms:

Matlab-like array manipulation language

Geometric figure drawing language

Screenplay animation language

Escher-like pattern generator

Music manipulation language

Mathematical function manipulator

Simple scripting language (à lá Tcl)

Three Common Mistakes to Avoid

Configuration File Syndrome

- ▸ Must be able to express *algorithms*, not just data
- ▸ E.g., a program like "a bird and a turtle and a pond and grass and a rock," is just data, not an algorithm

Standard Library Syndrome

- ▸ Good languages express lots by a combining few things
- ▸ Write a standard library in your language
- ▸ Aim for Legos, not Microsoft Word

Java-to-Java Translator Syndrome

- ▸ A compiler mostly adds implementation details to code
- ▸ Your compiler's output should not look like its input
- ▸ Try your best not to re-invent Java

What I'm Looking For

Your language must be able to express different algorithms

► Avoid Configuration File Syndrome. Most languages should be able to express, e.g., the GCD algorithm.

Your language should consist of pieces that can mix freely

► Avoid Standard Library Syndrome. For anything you provide in the language, ask yourself whether you can express it using other primitives in your language.

Your compiler must lower the level of abstraction

► Don't write a Java-to-Java translator. Make sure your compiler adds details to the output such as registers, evaluation order of expressions, stack management instructions, etc.

What's in a Language?

Components of a language: Syntax

How characters combine to form words, sentences, paragraphs.

The quick brown fox jumps over the lazy dog.

is syntactically correct English, but isn't a Java program.

```
class Foo {
   public int j;
   public int foo(int k) { return j + k; }
}
```

is syntactically correct Java, but isn't C.

Specifying Syntax

Usually done with a context-free grammar.
Typical syntax for algebraic expressions:

$$
\begin{aligned}
expr \quad \rightarrow \quad & expr + expr \\
| \quad & expr - expr \\
| \quad & expr * expr \\
| \quad & expr \, / \, expr \\
| \quad & \textbf{digit} \\
| \quad & (expr)
\end{aligned}
$$

Components of a language: Semantics
What a well-formed program "means."

The semantics of C says this computes the nth Fibonacci number.

```c
int fib(int n)
{
    int a = 0, b = 1;
    int i;
    for (i = 1 ; i < n ; i++) {
        int c = a + b;
        a = b;
        b = c;
    }
    return b;
}
```

'When I use a word,' Humpty Dumpty said in rather a scornful tone, 'it means just what I choose it to mean—neither more nor less.'

Source: Lewis Carroll, *Through the Looking Glass*, 1872.

Semantics

Something may be syntactically correct but semantically nonsensical

The rock jumped through the hairy planet.

Or ambiguous

The chickens are ready to eat.
Semantics

Nonsensical in Java:

```
class Foo {
  int bar(int x) { return Foo; }
}
```

Ambiguous in Java:

```
class Bar {
  public float foo() { return 0; }
  public int foo() { return 0; }
}
```

Great Moments in Evolution

Great moments in evolution

Assembly Language

Before: numbers

```
55
89E5
8B4508

39D0
7E08
29D0
39D0
75F6
C9
C3
29C2
EBF6
```

After: Symbols

```
gcd: pushl %ebp
     movl  %esp, %ebp
     movl  8(%ebp), %eax
     movl  12(%ebp), %edx
     cmpl  %edx, %eax
     je    .L9
.L7: cmpl  %edx, %eax
     jle   .L5
     subl  %edx, %eax
.L2: cmpl  %edx, %eax
     jne   .L7
.L9: leave
     ret
.L5: subl  %eax, %edx
     jmp   .L2
```

FORTRAN

Before

```
gcd: pushl %ebp
     movl  %esp, %ebp
     movl  8(%ebp), %eax
     movl  12(%ebp), %edx
     cmpl  %edx, %eax
     je    .L9
.L7: cmpl  %edx, %eax
     jle   .L5
     subl  %edx, %eax
.L2: cmpl  %edx, %eax
     jne   .L7
.L9: leave
     ret
.L5: subl  %eax, %edx
     jmp   .L2
```

After: Expressions, control-flow

```
10      if (a .EQ. b) goto 20
        if (a .LT. b) then
            a = a – b
        else
            b = b – a
        endif
        goto 10
20      end
```

99 Bottles of Beer in FORTRAN

```fortran
      program ninetyninebottles
      integer bottles
      bottles = 99
 1    format (I2, A)
 2    format (A)
 3    format (I2, A, /)
 4    format (A, /)
 10   write (*,1) bottles, ' bottles of beer on the wall,'
      write (*,1) bottles, ' bottles of beer.'
      write (*,2) 'Take one down, pass it around...'
      if (bottles - 1 .gt. 1) then
         write (*,3) bottles - 1, ' bottles of beer on the wall.'
      else
         write (*,3) bottles - 1, ' bottle of beer on the wall.'
      end if
      bottles = bottles - 1
      if (bottles - 1) 30, 20, 10
*     Last verse
 20   write (*,1) bottles, ' bottle of beer on the wall,'
      write (*,1) bottles, ' bottle of beer.'
      write (*,2) 'Take one down, pass it around...'
      write (*,4) 'No bottles of beer on the wall.'
 30   stop
      end
```

Alex Ford

99 Bottles of Beer in FORTRAN

```fortran
      program ninetyninebott
      integer bottles
      bottles = 99
1     format (I2, A)
2     format (A)
3     format (I2, A, /)
4     format (A, /)
10    write (*,1) bottles, '
      write (*,1) bottles, '
      write (*,2) 'Take one
      if (bottles - 1 .gt. 1
         write (*,3) bottles
      else
         write (*,3) bottles
      end if
      bottles = bottles - 1
      if (bottles - 1) 30, 2
*     Last verse
20    write (*,1) bottles, '
      write (*,1) bottles, '
      write (*,2) 'Take one
      write (*,4) 'No bottle
30    stop
      end
```

Backus, IBM, 1956

Imperative language for science and engineering

First compiled language

Fixed format lines (for punch cards)

Arithmetic expressions, If, Do, and Goto statements

Scalar (number) and array types

Limited string support

Still common in high-performance computing

Inspired most modern languages, especially BASIC

Alex Ford

COBOL

Added type declarations, record types, file manipulation

```
data division.
file section.
*     describe the input file

Iverson, IBM, 1960

Imperative, matrix-centric

E.g., perform an operation on each element of a vector

Uses own specialized character set

Concise, effectively cryptic

Primarily symbols instead of words

Dynamically typed

Odd left-to-right evaluation policy

Useful for statistics, other matrix-oriented applications

http://www.99-bottles-of-beer.net/language-apl-715.html

Algol, Pascal, Clu, Modula, Ada

Imperative, block-structured language, formal syntax definition, structured programming

```
PROC insert = (INT e, REF TREE t)VOID:
   # NB inserts in t as a side effect #
   IF TREE(t) IS NIL THEN
     t := HEAP NODE := (e, TREE(NIL), TREE(NIL))
   ELIF e < e OF t THEN insert(e, l OF t)
   ELIF e > e OF t THEN insert(e, r OF t)
   FI;

 PROC trav = (INT switch, TREE t, SCANNER continue,

Bill Wein, http://www.99-bottles-of-beer.net/language-c-116.html

99 Bottles of Beer in C

```c
#define MAXBEER 99
void chug(int beers);

int main()
{
  int beers;
  for(beers = MAXBEER; beers
  puts("\nTime to buy more b
  return 0;
}

void chug(int beers)
{
  char howmany[8], *s;
  s = beers != 1 ? "s" : "";
  printf("%d bottle%s of bee
  printf("%d bottle%s of bee
  printf("Take one down, pas
  if (--beers) sprintf(howma
  else strcpy(howmany, "No m
  s = beers != 1 ? "s" : "";
  printf("%s bottle%s of bee
}
```

Dennis Ritchie, Bell Labs, 1969

Procedural, imperative

Based on Algol, BCPL

Statically typed; liberal conversion policies

Harmonizes with processor architecture

For systems programming: unsafe by design

Remains language of choice for operating systems

Bill Wein, http://www.99-bottles-of-beer.net/language-c-116.html

ML, Miranda, Haskell

Functional languages with types and syntax

```
structure RevStack = struct
  type  'a stack =  'a list
  exception Empty
  val empty = []
  fun isEmpty (s:'a stack):bool =
    (case s
       of [] => true
        | _ => false)
  fun top (s:'a stack): =
    (case s
       of [] => raise Empty
        | x::xs => x)
  fun pop (s:'a stack):'a stack =
    (case s
        of [] => raise Empty
         | x::xs => xs)
  fun push (s:'a stack,x: 'a):'a stack = x::s
  fun rev (s:'a stack):'a stack = rev (s)
end
```

99 Bottles of Beer in Haskell

```haskell
bottles :: Int -> String
bottles n
  | n == 0 = "no more bottles"
  | n == 1 = "1 bottle"
  | n >  1 = show n ++ " bottles"

verse :: Int -> String
verse n
  | n == 0 = "No more bottles of beer on the wall, "
             ++ "no more bottles of beer.\n"
             ++ "Go to the store and buy some more, "
             ++ "99 bottles of beer on the wall."
  | n > 0  = bottles n ++ " of beer on the wall, "
             ++ bottles n
             ++ " of beer.\n"
             ++ "Take one down and pass it around, "
             ++ bottles (n-1) ++ " of beer on the wall.\n"

main     = mapM (putStrLn . verse) [99,98..0]
```

99 Bottles of Beer in Ha

```haskell
bottles :: Int -> String
bottles n
  | n == 0 = "no more bottle
  | n == 1 = "1 bottle"
  | n >  1 = show n ++ " bot

verse :: Int -> String
verse n
  | n == 0 = "No more bottle
             ++ "no more bot
             ++ "Go to the s
             ++ "99 bottles
  | n >  0 = bottles n ++ "
             ++ bottles n
             ++ " of beer.\n
             ++ "Take one do
             ++ bottles (n-1

main       = mapM (putStrLn .
```

Peyton Jones et al., 1990

Functional

Pure: no side-effects

Lazy: computation only on demand; infinite data structures

Statically typed; types inferred

Algebraic data types, pattern matching, lists, strings

Great for compilers, domain-specific languages, type system research

Related to ML, OCaml

Moore, NRAO, 1973

Stack-based imperative language

Trivial, RPN-inspired grammar

Easily becomes cryptic

Untyped

Low-level, very lightweight

Highly extensible: easy to make programs compile themselves

Used in some firmware boot systems (Apple, IBM, Sun)

Inspired the PostScript language for laser printers

Dan Reish,
http://www.99-bottles-of-beer.net/language-forth-263.html

The Whitespace Language

Edwin Brady and Chris Morris, April 1st, 2003

Imperative, stack-based language

Space, Tab, and Line Feed characters only

Number literals in binary: Space=0, Tab=1, LF=end

Less-than-programmer-friendly syntax; reduces toner consumption

Andrew Kemp, http://compsoc.dur.ac.uk/whitespace/

VisiCalc, Lotus 1-2-3, Excel

The spreadsheet style of programming

Visicalc on the Apple II, c. 1979

SQL

Database queries

```sql
CREATE TABLE shirt (
    id SMALLINT UNSIGNED NOT NULL AUTO_INCREMENT,
    style ENUM('t-shirt', 'polo', 'dress') NOT NULL,
    color ENUM('red', 'blue', 'white', 'black') NOT NULL,
    owner SMALLINT UNSIGNED NOT NULL
          REFERENCES person(id),
    PRIMARY KEY (id)
);

INSERT INTO shirt VALUES
(NULL, 'polo', 'blue', LAST_INSERT_ID()),
(NULL, 'dress', 'white', LAST_INSERT_ID()),
(NULL, 't-shirt', 'blue', LAST_INSERT_ID());
```

> SELECT * FROM users WHERE clue > 0
0 rows returned
