LAST Name __________________________  FIRST Name __________________________
Lab Time __________________________

bullet (5 Points) Print your name and lab time in legible, block lettering above.

bullet This quiz should take you up to 20 minutes to complete. You will be given at least 20 minutes—up to the end of today’s lecture hour—to work on the quiz.

bullet This quiz is closed book. Collaboration is not permitted. You may not use or access, or cause to be used or accessed, any reference in print or electronic form at any time during the quiz. Computing, communication, and other electronic devices (except dedicated timekeepers) must be turned off. Noncompliance with these or other instructions from the teaching staff—including, for example, commencing work prematurely or continuing beyond the announced stop time—is a serious violation of the Code of Student Conduct.

bullet The quiz printout consists of pages numbered 1 through 5. The last page is left blank; you may use it only for scratch work. When you are prompted by the teaching staff to begin work, verify that your copy of the quiz is free of printing anomalies and contains all of the five numbered pages. If you find a defect in your copy, notify the staff immediately.

bullet Please write neatly and legibly, because if we can’t read it, we can’t grade it.

bullet For each problem, limit your work to the space provided specifically for that problem. No other work will be considered in grading your quiz. No exceptions.

bullet Unless explicitly waived by the specific wording of a problem, you must explain your responses succinctly, but clearly and convincingly.

bullet We hope you do a fantastic job on this quiz.

Q4.1 (20 Points) Consider a discrete-time system

\[ F : [\mathbb{Z} \rightarrow \mathbb{R}] \rightarrow [\mathbb{Z} \rightarrow \mathbb{R}] . \]

Let \( x \) denote an arbitrary input signal and \( y \) the corresponding output signal. The output \( y \) is characterized by:

\[ \forall x \in [\mathbb{Z} \rightarrow \mathbb{R}] \text{ and } \forall n \in \mathbb{Z}, \quad y(n) = \begin{cases} 
0 & \text{if } n \text{ is an odd integer} \\
1 & \text{if } n \text{ is an even integer.}
\end{cases} \]

For each part below, explain your reasoning succinctly, but clearly and convincingly.

(a) **Memorylessness**: Select the strongest assertion from the choices below.

(I) The system must be memoryless.

(II) The system could be memoryless, but does not have to be.

(III) The system cannot be memoryless.

(b) **Causality**: Select the strongest assertion from the choices below.

(I) The system must be causal.

(II) The system could be causal, but does not have to be.

(III) The system cannot be causal.
(c) **Time Invariance**: Select the strongest assertion from the choices below.

(I) The system must be time invariant.

(II) The system could be time invariant, but does not have to be.

(III) The system cannot be time invariant.

(d) **Linearity**: Select the strongest assertion from the choices below.

(I) The system must be linear.

(II) The system could be linear, but does not have to be.

(III) The system cannot be linear.
Q4.2 (20 points) System H, shown below, is a feedback composition of real, discrete-time LTI systems F and G:

The impulse response \( f : \mathbb{Z} \to \mathbb{R} \) of system F is given by:

\[
\forall n \in \mathbb{Z}, \quad f(n) = \begin{cases} 
\frac{1}{4} & \text{if } n = -1 \\
\frac{1}{2} & \text{if } n = 0 \\
\frac{1}{4} & \text{if } n = +1 \\
0 & \text{elsewhere.}
\end{cases}
\]

The frequency response \( G : \mathbb{R} \to \mathbb{C} \) of system G is given by:

\[
\forall \omega \in \mathbb{R}, \quad G(\omega) = \frac{1 - e^{i\omega}}{\frac{1}{4} e^{i\omega} + \frac{1}{2} + \frac{1}{4} e^{-i\omega}}.
\]

For each part of this problem, explain your reasoning succinctly, but clearly and convincingly.

(a) Is the system F causal?
(b) Determine an expression for the frequency response $H$ of system $H$. Express—in a very simple form—the impulse response $h$ of system $H$ in terms of the impulse response $f$ of system $F$?

(c) Is the composite feedback system $H$ causal?
